Professional Summary

Backend Software Engineer with 3+ years of experience in **Java, Go (Golang), distributed systems, microservices, payment infrastructure, and checkout platforms**. Experienced in building scalable backend services, integrating APIs, improving system reliability, and applying Agentic AI, LLMs, and AI Development Lifecycle (ADLC) practices to engineering workflows.

Technical Skills

Backend: Java, Go (Golang), C++, Python, SQL

Frameworks: Spring Boot, Django, Flask

Distributed Systems: Microservices, REST APIs, RabbitMQ, Apache Airflow

Databases: MySQL, PostgreSQL, Redis, Firestore, ClickHouse

Cloud/DevOps: Docker, Kubernetes, Jenkins, Spinnaker, Linux, Git

AI: LLMs, Agentic AI, MCP

Work Experience

Razorpay

Software Development Engineer (Backend)

Bengaluru, India

Apr 2025 – Present

- Engineered a **Unified Wired/Wireless POS Integration** enabling seamless USB connectivity between billing and POS machines; projected to generate **200–250 Cr monthly revenue** from Tier-1 merchants including **Reliance, DMart, and ABFRL**. Also worked on multiple POS integrations.
- Implemented **end-to-end card payment flows** across microservices, handling encryption, authentication, and order creation for high-availability payment gateways.
- Led the **Ezetap-to-Razorpay merchant migration**, using Agentic AI workflows to automate migration and PR generation; reduced manual effort from **10 days to 2 days**, achieving an **80% efficiency gain**.
- Built a self-serve **SOPC to Magic Checkout migration** for Shopify merchants, automating onboarding, checkout migration, dashboard switching, authentication, and permissions across backend services.
- Expanded **Magic Checkout to international markets**, enabling 1,500+ merchants to sell and deliver outside India with dynamic market-based pricing and coupon validation.
- Built **merchant-specific country selection for Magic Checkout**, showing buyers only the countries supported by each merchant instead of displaying all 140+ countries.
- Integrated **ClickPost EDD and Delhivery Expected TAT APIs** into the shipping provider layer for buyer-aware delivery estimates with fail-safe fallbacks; delivered merchant-specific checkout customizations for **Neeman's, Borosil**, and others.
- Built multiple **MCP integrations, including an MCP server for Metabase**, enabling engineers to query production data through Claude using natural language; migrated MySQL tables to **Querybook** for centralized production-data exploration.
- Developed an **AI-powered merchant recommendation engine** using production configurations and conversion data for checkout recommendations based on peer benchmarking, LLM customization, and human approval workflows.

PocketFM

Software Development Engineer 1 (Backend)

Bengaluru, India

Aug 2024 – Apr 2025

- Owned the UGC Payout System for global writers, processing millions in payments with automated Django-based APIs for real-time tracking of earnings and rewards.
- Orchestrated complex financial workflows using Apache Airflow, boosting payout efficiency by 25% and ensuring 100% compliance with international finance standards.
- Reduced payment-related system errors by 30% by implementing a robust validation layer and real-time auditing checks.

Increff (NextSCM Solutions)

Software Development Engineer (Backend) — Intern to FTE

Bengaluru, India

Jun 2022 – Aug 2024

- Managed backend operations for major e-commerce players including Myntra, Amazon, and Flipkart, processing 13K orders/minute and facilitating 4.2M orders with 99.9% uptime.
- Delivered end-to-end integration of CRED Marketplace with WMS (Assure), enabling seamless inventory management for premium brands including Puma and DaMensch.
- Integrated RabbitMQ for asynchronous message processing, cutting system latency by 50% and improving horizontal scalability.
- Built a miniature WMS and POS system from scratch using Spring and MySQL during the internship phase.

Education

Lovely Professional University

Bachelor of Technology in Computer Science Engineering (CGPA: 8.23/10)

Punjab, India

Jul 2019 – Aug 2023

Key Projects

- Get-Filter Website:** Image processing tool using Flask and OpenCV; containerized with Docker and orchestrated on Kubernetes with Jenkins CI/CD.
- Chat Chat App:** Real-time Android application using MVVM and Firebase Firestore for low-latency messaging and authentication.

Certifications & Languages

Certification: Java Programming (NPTEL)

Languages: English (Professional), Hindi (Professional)
